

Surviving Cancer in Asia

Information, Technology, and Society in Asia

ITASIA 128

Network for Education and Research on Asia

What are the needs for Universal Health Coverage for cancer in Asia and how should it be provided?

If you or a person close to you were to receive a cancer diagnosis, what social systems and mechanisms do you think are necessary to support and complement cancer treatment?

Universal Health Coverage is a concept that aims to ensure that all people obtain the health services they need without suffering financial hardship.

The future of Asia is your future. Why not bring your own knowledge and ideas to a course that enables people from all disciplines to come together and share views on surviving cancer in Asia?

Please check UT-mate or ASNET webpage for detail.
